## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/23/2003 has been entered.

Applicants have cancelled claims 5-6 in the amendment B filed on 6/25/2003 (paper 12).

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

1. Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Applicants not provide a method to form a planar liquid crystalline organic layer has plural regions, which are in the same plane and have different electroconductivities (claim 1), or different alignment states of liquid crystal

molecules (claims 2-4) without low performance of organic EL device as Okada et al. (EP1083613A2) disclosed (page 4 lines 52-55).

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

1. Claims 1-4 are rejected under 35 U.S.C. 102(a) as being anticipated by Okada et al. (EP001083613A2) supplying in IDS.

Okada et al. teach a conductive liquid crystal device comprising:

- a pair of oppositely disposed electrodes 2/5,
- at least two organic layers 3 including
  - a planar liquid crystalline organic layer 3,
  - an organic luminescence layer 4,

disposed between the electrodes,

wherein

- the planar liquid crystalline organic layer has plural regions, which are in the same plane and have different electroconductivities, (page 4 lines 52-55) it is possible for providing low performance organic EL device to generate the a planar liquid crystalline organic layer with plural regions, which have different thickness or alignment according claims 2-4.

Art Unit: 2871

- the organic luminescence layer emits luminescences by receiving charges supplied by the plural regions of the planar liquid crystalline organic layer having different electroconductivities.
